

## Environmental Policy

Solar and Wind Applications is a renewable energy company focussed on reducing the use of natural resources and protecting the environment. Our aim is to offer innovative solutions in solar and wind technologies, making them happen in our time for our children's future.

We believe that everyone should be able to experience clean, green energy from renewable sources. In particular, the education of the next generation of energy users is essential which is why we have designed the S Cube as an educational resource. We hope this is encouraging children to become more aware of sustainable energy generation and their environmental impact. We also hope having fun with science will help inspire and develop future scientists.

We are committed to the prevention of pollution and will comply with all present and future environmental legislation and other regulations relevant to our energy installation, design and consultancy operations.

In achieving these goals, Solar and Wind Applications will:

- Encourage all staff to consider the environmental impact of their work routinely especially targeting some of the significant environmental aspects of our operations such as travel
- Provide appropriate training to all staff to enable them to implement this environmental policy
- Seek to reduce consumption of resources in our operations
- Promote environmental awareness to our suppliers and contractors and within the local community
- Encourage the education of children in sustainable energy by providing solar and wind installations for schools, householders, businesses and communities
- Maintain an effective Environmental Management System certified to the international standard ISO 14001 and consider the wider sustainability issues relevant to our business
- Establish objectives and targets and regularly review them to support continual improvements in our organisation.
